Artem Sheiko

Junior QA Engineer · Manual + API

SUMMARY

Since June 2026 I test a live charity platform in a Scrum team at SoftServe Academy. I start from the requirements, design tests from boundary values and equivalence classes, write reproducible bug reports and re-test every fix.

EXPERIENCE

QA Engineer (Manual)

Jun 2026 — present

SoftServe Academy · VictoryCenter

victorycenter.online

Internship June–September 2026, then I stayed on the team.

- **Requirements:** I read user stories and acceptance criteria with the BA and flag contradictions, gaps and conditions nobody can test. Several requirements were fixed before development started.
- **Test design:** Test cases and checklists in Zephyr Scale, linked to Jira stories. I build them from boundary values and equivalence classes: file formats, size limits, image dimensions, text length.
- **What I found:** Image upload let through files right at the edges it should reject: two validation bugs around the 5 MB limit (± 1 byte) and the minimum image size. An email field accepted four invalid formats. Plus UI localization mismatches, an undocumented control in a confirmation dialog and an interactive element without a label.
- **Testing & bug reports:** Functional and regression testing, DevTools for network requests, DOM and form attributes, device emulation and checking the UI against Figma. Reproducible bug reports with steps, priority, screenshots and video in GitHub Projects; I re-test every fix with the developers.
- **REST API:** Postman collections with Bearer auth, environments and JavaScript checks for positive and negative cases; test data rolled back after each run.

PROJECTS

навушники Telegram Mini App for discovering Ukrainian music

Three independent language checks (lyrics, audio, artist dossier) keep Russian-language songs out; recommendations learned from real reactions predict likes correctly 73% of the time, up from 61%; 650+ automated tests.

shkbb / **Lag** Instant replay & screen recorder for Windows

My role Owner — scope and roadmap, release testing on four machines with NVIDIA, AMD and Intel GPUs, 17 interface languages, the auto-update channel and docs.

shkbb / **UWFix** Ultrawide cutscenes without black bars · Windows & Linux

My role Owner — design and testing of the patch and restore flows, JUnit 5 tests, GitHub Actions builds for Windows and Linux.

EDUCATION

IN PROGRESS	**B.Sc. in Software Engineering (121)** State University of Information and Communication Technologies, Kyiv
SEP 2026	**Manual QC/QA Engineer Internship** SoftServe Academy · Certificate RY No. 31503/2026

LANGUAGES

Ukrainian — native · **English** — Upper-Intermediate (B2)

SKILLS

Testing: Functional · Regression · Smoke · Re-testing · UI & responsive · Cross-browser · Localization · Mobile on real devices
Test design: Equivalence partitioning · Boundary values · Decision tables · State transitions · Error guessing
API: REST · HTTP · JSON · Postman · Swagger
Tools: Jira · Zephyr Scale · GitHub Projects · Chrome DevTools · Figma · Claude Code · Cursor · Codex
Process: SDLC / STLC · Agile / Scrum · Test cases · Checklists · Bug reports · Traceability
Tech: SQL (basic) · Git · Linux CLI · Docker · nginx · C# / .NET · Java · TypeScript
